PROFESSIONAL SUMMARY

Backend Software Engineer with proven experience building scalable enterprise systems, multi-tenant platforms, and workflow automation solutions using Node.js, NestJS, TypeScript, and PostgreSQL. Experienced in developing microservices, third-party integrations, and orchestration layers across Broadband Management Systems, IPTV platforms, CRM systems, ticketing products, and OTT providers. Skilled in designing secure authentication systems, scalable APIs, automation workflows, and AI-assisted engineering processes using orchestrated agents and Playwright-based validation pipelines.

PROFESSIONAL EXPERIENCE

Software Engineer · Intellidata Tech Solutions Pvt. Ltd.

May 2025 – Present

- Engineered and maintained core modules of a Broadband Management System (BMS) using Node.js, Express.js, and React, serving multiple enterprise ISP clients.
- Implemented a secure multi-tenant authentication system with tenant-based DB isolation and dynamic database routing, supporting 5+ enterprise tenants.
- Integrated BMS with 5+ third-party systems including RSoft, Inventory Management, CRM platforms, Ticketing systems, and OTT/IPTV providers via scalable API workflows with payload transformation layers.
- Developed an IPTV management platform from scratch using NestJS, TypeORM, and PostgreSQL, supporting full subscription lifecycle management and middleware communication.
- Designed and built AI-powered orchestration agents to automate development workflows — fetching tickets via MCP integrations, analyzing requirements, initiating implementation, and executing first-level QA validation automatically.
- Implemented Playwright-based testing pipelines integrated into AI agent workflows, significantly reducing manual QA effort on initial validation cycles.
- Optimized Ticketing Management product architecture with modular design, centralized error handling, structured logging, and retry strategies — improving maintainability and system resilience.
- Collaborated across frontend, backend, and QA teams to deliver scalable, production-ready features.

PROJECTS

NGO Saathi — SaaS Platform · Node.js, Express.js, React.js, MongoDB

- Built a full-stack SaaS platform enabling NGOs to manage donations, volunteers, inventory, and events with role-based dashboards for NGOs, donors, and volunteers.
- Engineered scalable APIs and real-time features including chat systems and analytics dashboards.

iPaaS — Integration Platform as a Service · Node.js, NestJS, PostgreSQL, Docker

- Building a scalable integration platform to connect multiple systems and APIs with fan-out workflow orchestration, payload transformation pipelines, and fault-tolerant retry handling.

CORE SKILLS

Backend & Architecture

Node.js, NestJS, Express.js, TypeScript, REST APIs, GraphQL, Microservices, Multi-tenant Architecture, Workflow Orchestration, Distributed Systems

Frontend

React.js, JavaScript, HTML5, CSS3, Tailwind CSS, Material UI

Databases

PostgreSQL, MongoDB, TypeORM, Database Design

DevOps & Tools

Docker, Git, GitHub, CI/CD Pipelines, Jenkins, Grafana, Prometheus

Integration & Auth

JWT, Third-party APIs, Payment Gateways, WebSockets

AI & Automation

AI Agents, MCP, Agent Orchestration, Workflow Automation, Playwright Automation, AI-assisted Development

KEY HIGHLIGHTS

- Implemented secure multi-tenant authentication architecture
- Built AI-powered orchestration workflows for development automation
- Developed IPTV management platform from scratch
- Worked on enterprise-scale BMS and Ticketing systems
- Integrated multiple third-party systems and APIs
